***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 10-14 and 17 are rejected under 35 U.S.C. 102(e) as being anticipated by Gao (2002/003,5470).

As to claim 14, Gao teaches a method for creating a time domain signal to switch from frequency domain codec to time domain codec, the method comprising;

Applying a segmenting process for dividing the samples into window of frames of an audio signal;

Performing MDCT transform, analogous to lapped transform, on the input audio signal to generate a frequency domain signal;

Performing IMDCT inverse transform on the signal to obtain a time domain signal; and

using a time codec to compress the time domain signal without any loss to the signal (Par.0042-0043; Fig.5)

As to claim 17, Gao teaches where the time domain codec is uses coed excited linear prediction coding (CELP) (Par.0045).

Claim 10 is analogous to claim 14 and therefore rejected by Gao for the foregoing reasons.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gao.

Gao teaches where the frames are windowed, however, doesn't explicitly teach the shapes as claimed. Official Notice is taken that using the different claimed shapes of windows is well know in the art of speech coding and would have been obvious to one of ordinary skill in the art to include in Gao's art for the purpose of varying the number of samples with in the processed frames there by improving the bit allocation efficiency.

***Allowable Subject Matter***

Claims 1-9 are allowed.

Claims 15-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
